090.2119.2

We supply a complete system solution for office cabling systems.

Installation and applications
The 25 cm long plastic rail can be linked together to form any required length. It is fastened with screws inserted in the pre-punched holes. The screw heads are countersunk in the rails when tightened so that the cable cannot be damaged when being installed. The cable tie shelf is also very practical in riser zone cabling; the cables are easily fastened with cable ties, which is particularly advantageous with sensitive low-current and coax cables. The separator and the cable bridge are two handy additions, for use with all cable tie shelves. They are simply snapped into place anywhere on the cable tie shelf. The practical and simple clamp system requires no additional fastening means.

090.2033

The smart solution for interruption-free termination to round power cables

010.3077

– Two wired outlets in 40 seconds
– Tool-free IDC* contacting
– Integral connector locking
– For use with all customary round cables
– Mechanical and visual coding

* Insulation Displacement Contact

010.3071

010.3072

010.3073

The wiring is performed in seconds and no additional tools are needed – in floor, duct and ceiling installations – these are the benefits of the new 3-pole Cable Outlet, also for your next project.

060.0002
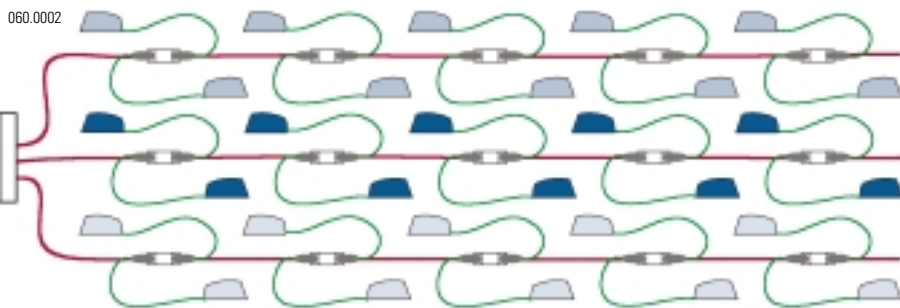

RCO Power also shines in double floor installations. Ideally, the connection boxes are fitted with RCO Power connection cables, and when being positioned, two of the boxes are each plugged to an adapter. The integral plug bolt prevents any accidental unplugging.

Cable Outlet Connection, 5-pole/400 V-16 A

For the interruption-free termination of several CO adapters to a round cable with solid conductors of 5 x 2.5 mm^2. The wires are mounting in the well-proven insulation displacement contact technology without causing any interruption. Ideal for cable ducts, hollow ceilings and hollow floors. The resulting installation is very flexible. The various colors of the cable covers the identification of different electric circuits, for a safe termination. For floating connections, it is mandatory to lock the connectors (VDE standard). We recommend using the required plug bolts with all applications.
